Alyona Golz

Technical Project Engineer | Embedded Systems | UAV Technologies | C | Python | Linux

Location: Yerevan, Armenia

Professional Summary

Technical Project Engineer with experience in embedded systems, UAV platforms, hardware/software integration, and technical product development. Worked on autonomous aerial systems at [COEX \(CopterExpress\)](#), supporting engineering teams in system validation, testing, troubleshooting, and quality improvement.

Strong background in C, Python, Unix/Linux environments, algorithms, and low-level programming gained through the intensive project-based Computer Science program at [École 42](#). Experienced in connecting engineering, product, and business requirements through analytical thinking and structured problem-solving.

Technical Skills

Programming Languages:

C, Python, Bash

Embedded & Autonomous Systems:

UAV platforms, PX4, MAVLink, Raspberry Pi, Arduino, flight controllers, onboard computers, hardware integration

Systems & Infrastructure:

Linux/Unix, system administration, virtualization, SSH, networking fundamentals, command-line tools

Software Development:

Algorithms, data structures, memory management, debugging, Git, Makefile, testing, documentation

Databases & Cloud:

MySQL, PostgreSQL, AWS EC2

Engineering Practices:

Quality assurance, system validation, troubleshooting, technical documentation, cross-functional collaboration

Professional Experience

COEX (Copter Express)

Technical Project & Quality Control Manager

2018 – 2022

Worked with engineering teams on autonomous systems and UAV-based solutions, supporting product validation, technical analysis, and system reliability improvement.

Responsibilities and achievements:

- Participated in development and validation of autonomous UAV platforms for industrial and scientific applications.
- Supported hardware/software integration processes involving flight controllers, onboard computers, sensors, and communication protocols.
- Performed system testing, troubleshooting, diagnostics, and preparation of technical documentation.
- Coordinated communication between customers, engineers, and product teams.
- Contributed to improving product reliability through structured testing and quality control processes.

Key projects:

Arctic Environmental Monitoring UAV

- Supported development and validation of an autonomous UAV platform designed for scientific buoy deployment on Arctic ice fields.
- Worked with PX4, COEX Pix Flight Controller, Raspberry Pi, MAVLink, and Embedded Linux.
- Contributed to successful field testing on the Arctic shelf in 2018.

Industrial Gas Monitoring UAV for Rosneft

- Participated in integration and validation of a UAV platform equipped with an industrial gas analyzer.
- Supported testing of onboard systems, communication interfaces, and sensor integration.

Beeline Business Russia

Key Account Manager

2012 – 2017

Managed relationships with key corporate clients in Moscow and the Moscow region, providing support and consulting on telecommunications and cloud-based business solutions.

Responsibilities and achievements:

- Managed a portfolio of key B2B clients, ensuring high-quality service and long-term partnerships.
- Consulted corporate customers on communication services, mobile solutions, fixed-line infrastructure, and cloud products.
- Analyzed client requirements and coordinated tailored technical solutions with internal teams.
- Supported contract management, service improvements, and issue resolution.
- Acted as a communication link between customers, technical specialists, and business teams.
- Developed strong expertise in enterprise customer needs, service operations, and technology solutions.

Usoft

Leading Specialist / Sales Lead Manager

2009 – 2011

Worked with legal information systems and software solutions.

Responsibilities:

- Supported software adaptation for customer requirements.
- Analyzed client needs.
- Coordinated implementation processes.
- Combined technical understanding with customer support.

Education

[École 42 Yerevan](#)

Computer Science Program

2021 – 2024

Intensive project-based computer science education.

Main areas:

- C/C++ programming
 - Algorithms
 - Data structures
 - Unix systems
 - Operating systems
-

[Institute of Bioinformatics](#)

Python Programming Course

2020

Practical programming course focused on Python development, automation, and problem solving.

[Volga State University of Telecommunications and Informatics](#)

Master of Sociology

2005 – 2010

Developed analytical research methods, communication skills, and systems thinking
